

How efficient are LED bulbs compared to incandescent bulbs?

Most LED light bulbs or LED globes are five to six times as efficient as incandescent bulbs.

In other words, they use only 10% to 20% as much electricity to produce the same amount of light.

The newest generations of LED's are eight to ten times as efficient as incandescent bulbs.

We use these new LEDs in our 5W LED Bulbs, 6W LED Bulbs and 9W LED Bulbs.
